This course is organised for all physicians performing breast surgery: general surgeons, oncological surgeons and plastic surgeons. It presents different surgical techniques in breast cancer treatment including breast reconstruction and aesthetic surgery.

Three morning sessions including **live surgery** directly from the operating room and videos allow a good view of the surgical technical details. A continuous discussion among the surgeons and the participants in the auditorium is encouraged to get a better understanding of the techniques.

Several conference sessions in the afternoon present the main guidelines and indications in breast surgery. Different workshops including small number of participants are also organised in order to closely discuss specific details of the techniques.

Finally the course includes a session of oral report by the participants and a special session entitled "complications & management" presented by the faculty.

All participants are encouraged to submit abstracts to be selected to oral presentations or poster presentation.
